"Graduate program planning," stated Mission '73, the publication which a study committee made in 1963 for Texas Western College, as it was called then, "should point toward areas in which we believe we can achieve distinction, should seek to capitalize on our location near Latin America, and should consider the specific needs of this part of the State of Texas." Thus, it occurred to me that one of the most logical and significant ways that we could move in the direction indicated was to acquire and build a microfilm collection of historical source materials, both published and unpublished, dealing with the history of Mexico, with particular emphasis on northern Mexico and the Spanish Borderlands.

Already a beginning had been made with the John H. McNeely Collection of rare books and pamphlets dealing primarily with Chihuahua during the Mexican Revolution. Moreover, by that time the first microfilm project had been completed, the records of the Ayuntamiento de Ciudad Juárez, or Juárez Archives, as it is usually referred to, with funding by the Pan American Round Table and the El Paso County Historical Society. The ninety-one reels contain an extraordinary amount of detail dealing with the El Paso area in the 16th and 19th centuries. Unfortunately, however, because of lack of professionalism in the filming process, some 30%-40% of the documents were illegible. This has been corrected in recent years with a second filming, which has been done in a highly professional manner.

My plans for building a microfilm collection of historical materials were outlined in my letter to President Joseph Ray of January 25, 1965 in which the sum of $1,000 was pledged, with the proviso that the administration contribute $4,000 from the Excellence Fund. Dr. Ray accepted my proposal and gave the program his full support, as did Baxter Polk, the Librarian at that time. For the next two years, the microfilming of materials in Latin American Collection of the University of Texas in Austin went forward, and by early 1967 we were ready for Phase II. Once again, Dr. Ray agreed to contribute another $4,000 with my pledge of $1,000, and within a year the project had been completed, providing us with a basic microfilm collection of Mexican newspapers, printed documentary collections, memoirs, standard histories, and materials on Chihuahua.

By this time we had purchased the Hidalgo del Parral Archives, together with the volumes of Provincias Internas which deal with this area. Beginning in the 1970s we began working in Chihuahua and Durango with the filming of the Periódico Oficial of Chihuahua, the Janos Archives, the Carrizal Collection, the Ayuntamiento of Chihuahua (more than 700 reels, the biggest of them all), the Juárez Cathedral, and the civil and ecclesiastical records of Durango. Added to these were several purchases—the Bexar Archives, the Spanish Archives of New Mexico, and the Mexican Archives of New Mexico.

Finally, I want to express my appreciation to the present library staff and the staff of Special Collections Department for their support.
of our Mexican microfilm program and their efforts to continue the work begun more than twenty years ago. I particularly want to congratulate them for having recently obtained a microfilm copy of the Archives of the Archdiocese of Santa Fe 1678-1900, which contains valuable information on our El Paso missions, but which was kept under lock and key for many years.

--W. H. Timmons
Entries marked with an asterisk (*) are described in the last section beginning on page 19 and continuing through page 29. A double asterisk (**) by an item number indicates that the library owns negative copies of the microfilm, making the collection available for duplication upon request.

Professor Rex W. Strickland used to say (quoting from Arnold Toynbee) that "history, to be understood, should begin at the parish level." This is particularly true of the Spanish Borderlands, wherein the large cities of today evolved from the tiny pueblos that grew up around the Spanish missions. El Paso, Texas, for example, is but the outgrowth of the mud and thatch hut covering the image of Our Lady of Guadalupe erected by Fray García de San Francisco in the year 1659 as a focal point for the conversion of the Indians. From the earliest Spanish mission—usually consisting of one or two friars and a couple of soldiers—the Indians were instructed in the Christian religion, taught basic agriculture and a few related trades, and thereby gradually changed their modus vivendi from primitive hunter/gatherers into a more complex social structure. A whole economy was begun. If it was a healthy growth and there was sufficient water and an absence of warfare, then immigration and the natural increase of population took care of the rest. Frederick Jackson Turner, Herbert Eugene Bolton, Walter Prescott Webb, and Adolph F. Bandelier have all described the process of winning of the West in one aspect or another. It was Bolton, however, who documented the great amount of material remaining which must be studied in order to arrive at a fair understanding of the Hispanic influence which molded the West and Southwest.

By the sixteenth century, Spanish government—particularly, the bureaucracy—had been developed to a fine art; indeed, it was the heyday of the scribes. Civil, military, and ecclesiastical laws governed the citizen's conduct in practically all matters, hearkening back to Roman times and, perhaps, strengthened through fear of the Inquisition then still in force. Few men, indeed, were cast in the role of the rugged individualist in Spanish America. It would have been rare to encounter such types as Daniel Boone or James Bridger. This is not to detract from the conquistadores: rugged men they were, but with a quite different mentality and approach. Almost every recorded exploration, each conquest and each toma was the result of a planned group effort directly approved by the king or viceroy and with the blessing of the Church. Unlike their Anglo or French-American counterparts, men did not just go off on solitary expeditions into the wilds of hunting, trapping, or exploration. Each scheme of conquest was preceded by an enormous amount of preparation. Permissions had to be sought and approved, organization had to be made, companies outfitted for long treks to the north, and all of it had to be done by the law or rules as set forth by the government. As a consequence, a large amount of paperwork was generated. Letters were sent back and forth to the viceroy or king and the expeditionary leader, thence to the Audiencia and various Church authorities and on to the military commanders. Lists of supplies needed to be drawn up, names of soldiers, priests, and travelers, plus the number of sheep, cattle, mules and horses taken with them. During the journey detailed diaries were kept and, when it was over, these same journals became part of the official report.
Once a mission had been established, of course, the paperwork continued to multiply. Franciscan friars kept ledgers of baptisms, confirmations, marriages, and burials, besides maintaining a steady stream of correspondence with their superiors in the Mexican interior and within the various custodias. Later, Jesuit missionaries did the same. Father Eusebio Kino, S. J.--probably the nearest semblance to the "mountain man" archetype--was withal a member of a religious order with strict vows of obedience to his superiors and to the Pope, who kept in constant correspondence with people in Mexico and Europe as he founded mission after mission in the wilderness of northern Sonora and Southern Arizona. The writings of Kino and Fray Junipero Serra, O.F.M., in California, have been the basis of many histories written on the Spanish period in the American West. Indeed, the sense of formality was so strong in Spaniards that almost no act could be regarded as having taken place unless it had been declared in writing, as though the written word were a sort of sacramental. In addition to the records left by the religious, the military government in the north left a prodigious amount of documentation.

This tradition continued in Mexico into the nineteenth century following its independence from Spain. With an authoritarian centralized government formed, the new bureaucracy managed to rival the old, with reams of reports detailing activities by political chiefs, mayors, justices of the peace, clerks, tribunals, census takers, tax collectors, and military, to name but a few. With the anti-clerical policies of the new government, much of the record keeping formerly entrusted to the clergy, such as births, marriages and deaths, now became a function of civil authorities. Meantime, church officials continued to duplicate these type of records for their own information, thereby augmenting the total fund of documentary material. Nor were the records of the preceding government destroyed, as sometimes happens following a revolution.

These old Spanish and Mexican records were usually handwritten on thick, almost acid-free, handmade paper (though some were printed), and tied into bundles chronologically--called legajos--where to this day they often remain unopened on the dusty shelves of church rectories, sacristies, and in the storerooms of government palaces. When opening a legajo, one is frequently amazed at the fine state of preservation of the documents, particularly in the warm, dry climate of northern Mexico, and due also to the quality of the paper and ink used at the time. Removed from the toxic effects of air, water and sunlight, it sometimes appears that the document was written only yesterday, except for the ancient orthography, which gives a clue to its age.

Other records of this sort have not fared as well. For example, the documents from the little Chihuahuan village of Carrizal were first discovered in a roofless adobe structure, completely at the mercy of the elements. Before these documents could be microfilmed, it was necessary to clean and put them in order. Other documents, though of a private nature such as the Hyslop Collection, were found thrown into a horse corral of an old hacienda, and required ten years of washing, deacidifying, drying and steam-ironing before they were in usable condition. Naturally, something is lost in legibility when documents are exposed to such extremes. But, throughout all the Mexican microfilm collections there are individual documents and, sometimes, whole groups of documents, that are almost illegible. Most of
them can be read, however, by exercising patience and with a little practice by bilingual scholars. In any case, there are thousands upon thousands of very legible documents from which a fair judgement of specific events and of the social structure of the era and locale may be gleaned.

The major collections held by the University of Texas at El Paso Library are herein described according to their origin and content. The titles which are followed by a double asterisk (**) are those which have been microfilmed by the U.T. El Paso Library personnel and the negative copy held by the university. Requests for positive copies may be addressed to Comgraphix, Inc., Southwest Microfilm Division, 2601 E. Yandell, El Paso, Texas 79903. For microfilm copies of all other collections listed, arrangements should be made directly with the institution holding the negative film.
One of the latest acquisitions of the Special Collections Department is the ninety rolls of microfilm that encompass the Archives of the Archdiocese of Santa Fe 1678-1900. Recently released by Archbishop Sánchez of Albuquerque, they were heretofore unavailable to scholars of this area without visiting the New Mexico State Records Center and Archives where the film was stored, or the Huntington Library in Los Angeles or the Genealogical Society of the Church of the Latter Day Saints in Salt Lake City, which was the first to be given the opportunity to microfilm the documents by Archbishop Edwin V. Byrne of Santa Fe during the early 1950s.

The noted historian and archivist, Angélico Chávez, in his spare time, put these documents in usable order from which the microfilm was made, and from which he was able to publish the indispensable catalog by the same title, Archives of the Archdiocese of Santa Fe 1678-1900, Bibliographical Series Vol. III (Washington D.D., Academy of American Franciscan History, 1957). Divided into eight sections with an introduction, appendix and index, the book describes the many categories of records in great detail, facilitating the use of the microfilm and saving hours of reading time for the investigator.

Upon publication of the catalog, many historians whose primary interest was New Mexico history and who lived in the vicinity of the Records Center began using the film. Historians in the El Paso-Juárez area, however, were at a disadvantage because of its location, and had to travel over 250 miles in order to study it. When it became evident that many of the church documents from the Mother Mission in Juárez (Nuestra Señora de Guadalupe del Paso) were lost, thus leaving numerous gaps in the history of this area, the Santa Fe Archdiocesan Records took on an added importance, since much correspondence and visitation reports from the El Paso area missions were contained therein. For example, there is a statement in the Santa Fe microfilm on Fray García de San Francisco, the founder of the mission in Juárez, about whom only a mere pittance is known, and a record of the first baptism there in 1662, and of the first marriage ceremony in the same year, and of the first burial rite performed there in 1663. The Christianizing of the Manso Indians was done by this same Franciscan friar, and what was at one time pure speculation has turned into documented history.

El Archivo De Hidalgo Del Parral

This microfilm of the Archives of the municipality of Hidalgo del
Parral was purchased by The U.T. El Paso Library in its entirety from the Micro Photo Division of Bell & Howell Company. It was filmed by Dr. Charles C. Di Peso, Director of the Amerind Foundation of Dragoon, Arizona over a period of many years. Funded by both Bell & Howell Company and Mr. and Mrs. George W. Chambers of Arizona Silhouettes, there are approximately 300,000 documents on the 326 rolls of film dating from 1631 to 1821. A xeroxed and bound translation (2 vols.) of the Index to El Archivo de Hidalgo del Parral (Micro/Ref./F/1391/P377/153/r) by Ms. Consuelo Boyd was purchased and can be used in the Special Collections Department of the library.

Parral, in the state of Chihuahua, is located about 120 miles southeast of the city of Chihuahua in the foothills of the Sierra Madre Occidental. The district is known for its silver and gold mines, which has always been the principal industry of the area, along with smelting. Santa Bárbara and San Francisco del Oro are two of the most famous mines there. The Archives of Parral on microfilm are concerned only with the documents of the Spanish colonial period. As usual, the archives record an almost infinite variety of subjects, protocols, tribunals and daily business. Naturally, since mining and smelting were the principal industries, documents recording these are probably in the majority. It is one of the best records for a beginner in this field to use, since it enjoys the unusual luxury of having a typed Index in English.

14 rolls
1671-1893

The Church of Nuestra Señora de Guadalupe de los Mansos del Passo del Norte (popularly called the "Juárez Cathedral"), until the Mexican War of 1846-1848, was the repository of all the church records within a probable radius of fifty or more miles. Known then as the "Mother Mission" of the area, it served as sort of an intermediate command post for the Episcopal See located in Durango, México. The Bishop of Durango had jurisdiction over a tremendously large diocese which extended as far north as Taos, New Mexico and, of course, included the El Paso area. Whereas important cases were referred to Durango, the Mother Mission kept many of the minor records such as baptisms, confirmations, marriages, and interments, plus a great deal of correspondence. Then, after the Mexican War, with Bishop Jean Baptiste Lamy's arrival at Santa Fe, the diocese was divided, and cases over which only a bishop had jurisdiction were sent to him.

In 1971, the Library Special Collections Department (then called the Archives) began microfilming as many of these church and mission records as possible. With the permission of Father José Saiz at San Elizario, the old presidio chapel records were filmed, and Father Pete Martínez, S. J., of Ysleta allowed the documents of Mt. Carmel Mission to be filmed, though at either place there was little available among the documents of pre-Mexican War vintage. At the time, permission was not granted to film the records of Nuestra Señora de la Purísima Mission at Socorro, Texas, but access to these records was gained in 1979, finally, and they too were microfilmed. Unfortunately, nothing dating prior to 1846 was found. With
these small ventures under their belts, as it were, the archivists decided
to take the plunge into deeper waters and to seek permission to film the
sister missions in Cd. Juárez, namely, the missions of Senecú, Real de
San Lorenzo and, of course, the Mother Mission itself, Nuestra Señora de
Guadalupe. An investigation showed that the two former churches had turned
over their records to the Guadalupe Mission at some point (if, indeed, these
sister missions had ever stored them), so the Mother Mission itself became
the focal point of the search. Permission was readily granted to film the
existing material at the church by the pastor, Father Isidro Payan, but
to the disappointment of all, large gaps were found in the available records,
and only about 12,000 documents were filmed of what should have been a much
larger collection. The absence of the material, however, only served to
whet the appetites of the investigators.

Through connections in the Archivo General de la Nación in México,
D. F., the Franciscan Section of the archives was checked to see if any
of the missing records were there. The search proved fruitless. In the
end, the inference was clear: the records at the Mother Mission had either
been borrowed or stolen. For example, the original Act of Foundation of
the church, dated 1659 and signed by Fray García de San Francisco, was
still there in 1888, when the historian, archeologist and ethnographer,
Adolph F. Bandelier, copied it.* By 1914, when Anne E. Hughes, the Bolton
scholar, came to Cd. Juárez to research the act of foundation and other
documents, she reported that it was missing. Then followed a long line of
investigators who, in their search for the truth, were seemingly not above
a little larceny, and the archives dwindled in size. In all honesty, it
must be stated that the archives during those early years were kept in an
unlocked room of the adjoining rectory, where the frequent daily visitors,
including tourists, might have helped themselves to any number of documents.

In the summer of 1980, during a session in which librarians from U.T.
El Paso were meeting with librarians in Cd. Juárez, the fact was brought
up that about 1,000 of the missing documents from the Cathedral were resting
in the archives of the El Paso Public Library. Cesar Caballero, a member
of the Board of Directors of that institution, stated that he would bring
the matter up at the next board meeting, which he did. Dr. James M. Day,
then chairman, and the other members agreed that the documents should be
returned to their rightful owner. On December 8th of that year (by coinci-
dence, the anniversary date of the founding of the Mother Mission), Mr.
Caballero and Mrs. Mary Sarber of the public library, returned the documents
to Father Payan, after first having microfilmed them for posterity.

By then, many of the researchers using the Mexican microfilm collection
at the Special Collections Department had become aware of the missing
documents and were anxious to help recover them. In 1982, one of these,
Dr. Terry Reynolds, an anthropologist at New Mexico State University,
reported that she had discovered that there were about five linear feet of
the Mother Mission’s records stored at the Catholic Archives of Texas in
Austin, which in the vernacular of archivists translates into about 4,000

*The holographic copy by Bandelier of the original Act of Foundation
is in the Peabody Museum of Archaeology & Ethnology, Harvard University,
Cambridge, Mass.
documents. As soon as possible, after receiving this information, arrangements were made with Sister Dolores Kasner, O.P., the archivist, who agreed to have them indexed and microfilmed for the U.T. El Paso Library. At this writing, the work is being done and the film should arrive in El Paso by October, 1983.

As if to prove the truth of the adage, "It never rains but it pours" during the Spring of 1983, another group of the missing archives appeared. Mr. Mark Koenigsberg, an antique dealer and numismatist in El Paso, had come into possession of another 1,000 documents from the Mother Mission. When he learned of their origin and true value, he lent them to his friend, Mr. Dave Daugherty of the U.T. El Paso faculty, who brought them to the Special Collections Department so that they could be microfilmed and kept with the other records. Some of the documents had their origin at Nuestra Señora de las Caldas, a lost mission in the El Paso valley.

Meantime, Mr. Terry Corbett of Las Cruces, discovered that many of the now missing records from the Mother Mission had been filmed at an earlier date by the Church of the Latter Day Saints. A comparative study showed that they had some eleven rolls of microfilm of baptismal, marriage, and burial records that were missing from the rolls had by the Special Collections Department, and arrangements have been made to purchase them. They, too, should arrive at this library by October, 1983.

While it is probable that all the missing documents of the old Mother Mission in Juárez will never be found, the staff of the Special Collections Department is forever on the lookout to fit together the missing pieces of the puzzle. The collection is known as the "Juárez Cathedral Documents (MF/489)" which is a misnomer, since until 1888, Juárez was named "Paso del Norte" and the Mother Mission did not become a cathedral until 1958.

Archivos de la Catedral de Durango
MF #494
20+ rolls
1635-1820

Only about 20,000 documents have been microfilmed at the Cathedral of Durango. These date from 1635 until 1869, but are far from complete. They are of importance to the western historian, however, mainly because the diocese of Durango, during the Spanish and Mexican periods, extended as far north as Taos, New Mexico. After the Mexican War, upon the arrival of Bishop Jean Baptiste Lamy in Santa Fe, the northern part (in the United States) was cut off from the southern part of the diocese, resulting in some confusion. Most of the material filmed contain Actas Capitulares and the collection of tithes, and copybooks of correspondence. Of particular interest are the records of the visitations of Bishop Don Pedro Tamarón y Romeral.

Dr. Michael M. Swann produced an index to the various rolls, which may be obtained by writing to the Special Collections Department.
The Chihuahua Municipal Archives Collection is U.T. El Paso Library's single largest collection of Mexican archives on microfilm, consisting of over 600 rolls of 35 mm film, both positive and negative. It was begun in 1970 by Dr. W. H. Timmons of this university with the support of then Governor Oscar Flores of Chihuahua, former governor Francisco R. Almada, and the mayor of that city, Ramón Reyes García. University of Texas at El Paso Archivist Leon C. Metz supervised the project and Roberto Pérez of Chihuahua was the cameraman. Funds from the library and the vice-president's office were made available for the full-time project which continued for three years.

These archives are of incalculable value for the study of northern Mexican history because not only is Chihuahua the largest state (and one of the original nineteen), but the State Archive was destroyed by fire in 1941, leaving the municipal archives as the only real source for the 16th and 19th century records. In addition to these documents, the Chihuahua Official Newspaper collection belonging to the historian Francisco R. Almada was microfilmed as an adjunct to the collection.

The city of Chihuahua was established in the early 1700's as a commercial center for the nearby silver mines. In fact, to this day, the state is Mexico's greatest producer of silver, lead and zinc. It is also the leading state in the production of lumber and cellulose. The finest example of colonial architecture in Northern Mexico is the Chihuahua Cathedral as well as the most important archeological site in the north -- Casas Grandes. Ranching, agriculture and manufacturing are important industries, also, and can be found in the cities of Chihuahua, Cd. Juárez, Hidalgo del Parral, Delicias and Camargo.

Cabeza de Vaca probably went through the state in 1536, and less than fifty years later, many leading Spanish conquistadores had made the trek across the Chihuahuan desert into New Mexico and Texas. During the 17th century, the silver mines of Santa Eulalia were developed and, although there is no official record that has so far come to light, some historians conjecture that silver was discovered there as early as the 1590's. Santa Eulalia is only fifteen miles from the city of Chihuahua. During this period, the Spaniards also opened the mining district of Cusihuiriachic in the Tarahumara Indian country, and the Santa Bárbara mines near Hidalgo del Parral. Other famous mines in Chihuahua are near Batopilas, Ocampo (formerly, Jesús-María), and the mine at Dolores. In fact, the mines in this one state alone are so numerous and many of them so famous, that an encyclopedia would be necessary to describe them.

Under colonial rule, Chihuahua became one of the Interior Provinces with its own military commandant-general, which was also the starting point or the terminus for the Chihuahua Trail, that led up through Paso del Norte to Santa Fe with caravans of merchandise going and coming.
After the Independence, Chihuahua became host to many important figures, beginning with Father Hidalgo and, later, Benito Juárez. In 1910, the city became the starting point for the great Revolution that began in that year. The exploitation of the peones by such ostentatious hacendados as Lulú Terrazas and others, was to culminate in the revolt led by General Pancho Villa.

Archivos del Ayuntamiento de Cd. Juárez
MF #495
91 rolls
1726-1899

This series was filmed in the Juárez Municipal Palace during the years 1961-1963. Miss Margarita Gómez, a resident of Juárez and a member of the El Paso County Historical Society, knew of these important records through her acquaintance with Professor Armando E. Chávez, who was then in charge of the archives. Realizing their importance to the history of the area and anxious to see them preserved, she suggested to both Professor Chávez and to Dr. Joseph Leach, President of the Historical Society, that this valuable treasure be put on microfilm. Miss Gómez also went to the ladies of the Pan American Round Table, to which she belonged, and they agreed to help fund the project. Dr. Leach, who was the English Department Chairman at Texas Western College (now, U.T. El Paso), asked Baxter Polk, Director of Libraries, to squeeze the remainder of the necessary finances out of his small budget. Dr. Rex Gerald (who was really the only person on campus who knew anything about microfilming, having filmed over three thousand documents of the Janos Archives previously) lent his advice and influence as Director of the Texas Centennial Museum to the project. Mr. Polk hired James Fulton, a local artist, to be the cameraman, and with a Type E, portable Kodak that fit into two suitcases, the actual work was begun at the Municipal Palace in Juárez, where the material was stored.

Dr. C. L. Sonnichsen, Dean of the Graduate School, and Dr. Rex W. Strickland, chairman of the History Department, both supported the project, as did Dr. Joseph M. Ray, President of the University. Two years and ninety-one rolls later, the project was brought to a halt with the filming of the years 1894 and part of 1895. Those were turbulent years for the Mexican nation and Professor Chávez wanted to protect the privacy of individuals who might have been active during that period and who were still alive. Three positive copies of the ninety-one rolls were made with one set to be used in the college library; another set was turned over to the municipal government of Juárez, complying with the terms of the agreement which had been made. The third positive set was purchased by the Pan American Round Table and in a special ceremony presented to the Director of the Archivo General de la Nación. The ceremony was held in El Paso.

Paso del Norte—which was renamed Ciudad Juárez in 1888—has among its municipal archives documents that date back to the 1750s. A few scattered documents are dated prior to this such as the probate of the records of the Don Antonio Valverde Cossío estate during 1728 and 1729. Although there are more than 90,000 documents making up the municipal archives, there does
seem to be interruptions or gaps in places. J. J. Bowden in his outstanding book, *Spanish and Mexican Land Grants in the Chihuahua Acquisition* (El Paso: Texas Western Press, 1972), wrote of American troops being quartered in the municipal palace in Paso del Norte during the Doniphan Expedition (1847) and destroying "a large portion of the public records by using them to kindle fires and to light candles." The documents contain correspondence, registers of land, accounts of Apache raids, criminal reports, decrees, census reports (including the census of 1790), mining claims (including a few by Americans in the 1830s), grants, and a myriad of other subjects extending from the Colonial Period to near the end of the Porfiriato. In all, they give a comprehensive view of day-by-day working of the municipal government.

Because this series (MF/495) was the library's first attempt at microfilming, a poor camera, insufficient lighting, not to mention inexperienced personnel and other detrimental factors, not all of the film turned out as well as had been hoped. Nevertheless, it has been of great value to researchers over the years. When it was finally decided to refilm the entire archive, the question arose as to whether this first filming should be left intact or thrown away. Since it has been used so much and cited again and again besides containing some material that has disappeared during the last twenty years, it was decided to keep it as a collection completely separate from the second filming (MF/513), and is known as the Archivo del Ayuntamiento de Cd. Juárez. This second filming is of better quality, has individual frame numbers, and contains material which was not available for the first filming. Please keep this in mind when ordering copies.

Archivo[al Histórico[al Del Gobierno Del Estado de Durango

MF #492
369+ rolls
1578-1822

Founded about 1561 by Francisco de Ibarra, it became the capital of the province of Nueva Vizcaya (New Biscay), which Ibarra named in honor of his home province in Spain.

Together with the Archivo de Hidalgo del Parral (which was sometimes the unofficial capital of Nueva Vizcaya) the documents in the collection are central to any study of the history of the northern frontier. More than 375,000 documents have now been filmed, extending from the 1560s to 1890s, and include everything from population totals, taxation, Indian Wars, to bullfighting and public hygiene; also included are records on property, justice, mining, military correspondence, jails, road repair and hospitals, to name but a few.

A roll-by-roll description, entitled Archivo del Estado de Durango, of the first 230 reels is available upon request to the Special Collections Department, which was compiled by members of the library staff and Dr. Michael M. Swann of the University of Nebraska-Lincoln.
About one hundred and fifty miles south of El Paso, as the crow flies, lies the sleepy little hamlet of Janos, Chihuahua. Established in 1890, it began its existence in the same nonchalant manner that it enjoys today, except for occasional ferocious raids by the Apache Indians. In fact, a small fort had been built there as early as 1686 before the town was even established in order to address the problem of Indian depredations in the area. These attacks increased to such an extent that they inhibited growth in these northern districts, which caused the King of Spain to send one of his best military advisors on an inspection tour of the region to find a solution. This tour, made by the Marqués de Rubí and accompanied by Captain Nicolas Lafora, was made in 1766. His recommendations were implemented and published by the Crown as the Reglamento e instrucción para los presidios que se han de formar en la línea de frontera de la Nueva España. Resuelto por el Rey N. G. en cédula de 10 de Septiembre de 1772. This order provided for a line of forts to be built traversing the northern frontier from the west to the east coast of New Spain, lying about 40 leagues, or approximately 120 miles, apart. The fort at Janos was incorporated into this chain of presidios and, as a result, grew in importance.

Following Mexico's independence from Spain in 1821, Janos continued as a hub of military activity. James Kirker—known in Mexico as "Santiago Querque"—was a familiar figure there. He and his band of Delaware Indians collected bounties on Apache scalps from the government of Chihuahua, until the same government awoke to the fact that it could not distinguish between an Apache scalp and most Mexican scalps. They were all the same to the bloodthirsty "Querque", who inspired at least as much fear among the populace as the dreaded Apaches.

In 1880, Victorio and his band passed within twenty-five miles of the village with Colonel Joaquín Terrazas hot on his heels, until a few weeks later when he was killed at Tres Castillos. Such raids drew to a close in 1886 when the Apache Geronimo passed across the Janos plain; thereafter, it lapsed again into its original state of somnolence. The adobe fort fell into disuse and became a ruin; today, even its priest must come from another town to say weekly Mass.

In 1954, Rex Gerald, Director of the El Paso Centennial Museum at Texas Western College (now, The University of Texas at El Paso), was able to recognize three rows of foundation stones of the old presidio, but on a return visit to Janos in 1961, he was no longer able to find even these. He did find the archives of the local government stored in the sacristy of the church, however, and managed to film some 3,000 of the documents, working with limited funds.

These served to whet the appetites of researchers with the result that, in 1969, University Archivist Leon C. Metz, accompanied by Roger Flores, Technical Director of Microfilming at Comgraphix, Inc., and translator Frank Scott of the U.T. El Paso Library, plus two students, travelled again to Janos.
for the purpose of filming all the documents available. Conditions there were primitive by American standards, and finding that the town had no electricity, Metz and Flores used a portable generator attached to a Kodak planetary camera to film the entire archive, consisting of some 37,000 documents. The adventures and tribulations undergone by the team merit another story. In any case, the film or thirty-seven rolls, is now available in the University Library.

The Carrizal, Chihuahua, Collection

MF #505
23 rolls
1827-1913

Carrizal, a small agricultural community in north central Chihuahua, located about ten miles from Villa Ahumada, is mentioned in the Diario y Derrotero de lo Caminado, Visto y Observado en el Discurso de la Visita General de Precios, Situados en las Provincias Internas de Nueva España de Don Pedro de Rivera y Villalón, who visited there on December 23, 1774, while on an inspection tour ordered by the King of Spain. In 1772, the Commandant-Inspector of the Provincias Internas, Hugo Oconór, spent time there, since the presidio that occupied Carrizal had been removed to that place from Paso del Norte, being how part of the new line of fortifications against Apache raiders, which had been established upon the recommendation of the Marqués de Rubí. Then, in 1841, the prisoners which had been taken during the Texan Santa Fe expedition stopped in Carrizal on their way to Chihuahua, as is recounted by George Wilkins Kendall in his Narrative of the Texan Santa Fe Expedition. It is a small, out-of-the way place inhabited by never more than 400 souls, but which nonetheless keeps popping up again and again in history books.

On February 15, 1847, Carrizal was captured in the name of the government of the United States by Colonel Alexander Doniphan, accompanied by less than two dozen men and his guide, James Kirker, the scalping hunter. It appears that the U.S. government did not want it. In time, this raid was balanced by the attempt of Captain Charles T. Boyd of The Pershing Punitive Expedition, to march his troops through Carrizal against the advice of General Félix U. Gómez, commander of the Mexican Constitutionalist Army there. Some historians have compared this attack to the Charge of the Light Brigade at Balaklava. In any case, it was a decided victory for the Mexicans, though the commanders of both forces were killed in the engagement. Both are considered heroes to this day.

During the late 1960s, the U.T. El Paso Library was approached by a Mexican national carrying two gunny sacks full of old documents dating from 1827 to 1913, which had their origin in Carrizal. Not wishing to see potentially valuable documents lost or possibly sold into the private collector's market, the library bought them. Upon close examination by scholars, it was soon realized that most of the material fell into the category of Mexican National Patrimony, which under both U.S. and Mexican law, is illegal to purchase. Complicating the matter still further, the documents could not easily be returned to the Mexican government because state money had been used in the transaction, and official permission would
be needed in order to dispose of the papers. When, in July of 1973, Fred W. Hanes took over as Director of Libraries, he found these documents in the library hanging from his neck as if they were an albatross. After a great deal of bureaucratic paperwork, he was finally able to obtain authorization to return the documents to the State of Chihuahua. The papers were first restored and microfilmed, and then were returned to a representative of Governor Bernardo Aguirre. The microfilm is in the possession of the Special Collections Department, while a positive copy has found a home in the Centro de Información in Chihuahua City.

Ciudad Juárez, Chihuahua, Municipal Archives

MF #513
45 rolls
1750-1869

Almost twenty years passed after the microfilming of the Juárez Municipal Archives when the University Library decided to film them again. Scholars using the collection, known as Archivos Del Ayuntamiento de Cd. Juárez (MF/495), became increasingly dissatisfied with the quality of the film, especially because of the apparent absence of a light meter on the old portable camera used in the first filming, which left some portions of the film so dark that it was almost illegible, and particularly, because the university had not been allowed to film those years following 1895. Specialists in the study of the Revolution of 1910 had very little documentation of events which happened in Juárez, which on several occasions had been headquarters for Pancho Villa and Francisco Madero, not to mention the site of at least two important battles. Also, frame numbers were hard to read or missing, precluding any hope of obtaining a computerized index of the material which had been filmed.

Dr. Ricardo Aguilar, at the time Assistant to the Vice President of Academic Affairs on campus, approached his friend, Manuel Quevedo Reyes, Mayor of Juárez, on behalf of the library, and permission was obtained to begin refilming with the proviso that positive copies be given to the Universidad Autónoma de Cd. Juárez. By 1981, the archives, which had formerly been located in the municipal palace, had been stored in the municipal library of Juárez. A room was made available for the microfilming team, and a Kodak Recordak microfilm camera was installed. With typical Mexican hospitality, the keys to the archives were turned over to U.T. El Paso librarians and the filming was begun.

Immediately, unforeseen problems arose. The archives themselves, instead of being sewn into legajos as they were during the first filming, had since been hardbound by a professional bookbinder, reflecting somebody's misguided efforts to preserve them. This, of course, made it difficult to film those documents that had writing in the valley of the books. In addition, the automatic frame counter supplied by Kodak Company proved worthless for this type of work, since its height made it always out of focus to the material being filmed. Because frame numbers are essential to computer indexing, it became necessary to go ahead by numbering each frame by hand, thereby slowing down the project. In many cases (which was expected), the ink had faded or had bled through the paper, making
the documents difficult to read. These were just a few of the technical or environmental problems encountered.

The project directors thought it was best to begin filming the material which had never been filmed before, i.e., the archives from 1895 until approximately 1940. This material is contained on rolls 1-40 and is known as Part I. Following that, the documents beginning with 1750 and running through 1894 were re-filmed and constitute Part II of the collection. Indications on the list on the shelf of the present store room of the Juárez Public Library, show that at one time there were books containing documents from 1726, but these, apparently, are no longer available, possibly having been stored by the authorities in that city in a more secure place.

Provincias Internas

MF #478
65 rolls
1604-1822

Following the tour of the Internal Provinces of New Spain in 1766 by the Marqués de Rubí and Captain Nicolas de Lafora and the recommendation to the Spanish king to order that a line of fortresses be constructed across the northern frontier to protect the inhabitants against Apache raids, the Visitador in Mexico City, José de Gálvez, made the further recommendation that these provinces become part of a plan to reorganize the entire government of New Spain. Therefore, the king officially designated these frontier lands to be known as the Provincias Internas. They formed, as it were, almost an independent viceroyalty under the direction of a commandant-general who had complete jurisdiction over political, judicial, and economic or fiscal affairs therein, and was directly responsible only to His Majesty, rather than to the viceroy. This royal decree was issued in 1776, and Chihuahua became the seat of the new government with General Teodoro de Croix (also known as the Caballero de Croix, and brother of the viceroy of the same name) in command. In 1772, the Irishman-turned-Spaniard, Hugo Oconór, as Commander Inspector, had already set up the fifteen presidios at 120 mile intervals, approximately, that formed the chain from the west to the east coasts of Mexico. Now, it only remained for General de Croix to implement this barrier of protection.

The microfilmed material represented here consists of some eighty rolls of microfilm ordered by Dr. W. H. Timmons and the U. T. El Paso Library.
SUBJECT INDEX
